

ACKNOWLEDGEMENT

At the outset, I thank the almighty for strength and his inspiration to make my dream a success. I also express my sincere gratitude to Mr. Pradeep Rawal, SPE (HRMS) for providing me the adequate facilities, ways and means by which I was able to complete this project in record time. In spite of their busy schedule, they always guided me throughout the project, and enlightened me with their ideas and views whenever required. I acknowledge their invaluable help and suggestions in implementing the project. I am thankful to them for sparing their valuable time and encouraging us at every stage. I also express my sincere gratitude and thankfulness to the airport staff for their cooperation and support.

My hearty and inevitable thanks to all the respondents who helped me to bring out the project in a successful manner. Last but not the least I extend my gratitude towards my parents, friends and employees of Centre for Railway Information System who extended their whole hearted support towards the successful completion of Project Work.

During this project I could build upon the understanding and knowledge of the subject, acquired new competencies and skills by way of which now I am confident and in a position to make an important contribution towards this industry.

Thank You

Karan Singh

ORGANIZATION INTRODUCTION

The **Centre for Railway Information Systems (CRIS)** designs, develops, implements and maintains most of the important information systems of Indian Railways. It is located in Chanakyapuri, New Delhi. CRIS was established by the India's Ministry of Railways in 1986.

Work

CRIS designs, develops, implements and maintains information systems for Indian Railways. It has also developed, implemented and maintained IT systems for the Andaman and Nicobar Islands ship-ticketing system. The number of projects handled by CRIS has increased from three in 2000 to more than 80 by 2018.

COA (Control Office Application), which assists train controllers (despatchers) in planning and tracking the movement of trains across the network, shares its data with applications such as NTES (with which passengers can obtain a train's location and expected movement) and FOIS. Train punctuality reports are generated through ICMS (Integrated Coaching Management System), which also receives data from COA.
